

The listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1.-26. (Canceled)

27. (Original) A light-emitting element comprising:

a pair of electrodes; and

a first layer containing a light-emitting material;

a second layer containing a first organic compound and a material having an electron donor property for the first organic compound; and

a third layer containing a second organic compound and a material having an electron acceptor property for the second organic compound,

wherein the first layer, the second layer, and the third layer are interposed between the pair of electrodes and sequentially formed in such a way that the third layer is formed to be in contact with one of the pair of electrodes.

28. (Original) A light-emitting element according to Claim 27, wherein the first organic compound is an organic compound having an electron transporting property.

29. (Original) A light-emitting element according to Claim 27, wherein the first organic compound is a metal complex having a ligand with a  $\pi$ -conjugated skeleton.

30. (Original) A light-emitting element according to Claim 27, wherein a material having an electron donor property is an alkali metal, an alkaline earth metal, or a rare earth metal.

31. (Original) A light-emitting element according to Claim 27, wherein the second organic compound is an organic compound having a hole transporting property.

32. (Original) A light-emitting element according to Claim 27, wherein the second organic compound is an organic compound having an aromatic amine skeleton.

33. (Original) A light-emitting element according to Claim 27, wherein the material having an electron acceptor property is a metal oxide.

34. (Original) A light-emitting element according to Claim 27, wherein an electrode of the pair of electrodes being in contact with the third layer is made from a conductive material formed by sputtering.

35. (Original) A light-emitting element according to Claim 34, wherein the conductive material is transparent to visible light.

36. (Original) A light-emitting element according to Claim 27, wherein a part of the first layer comprises molybdenum oxide.

37.-46. (Canceled)

47. (Currently Amended) A light-emitting element comprising:

a pair of electrodes; and

a first layer containing a light-emitting material;

a second layer containing a first organic compound and metal having an electron donor property for the first organic compound; and

a third layer containing a second organic compound and a metal oxide having an electron acceptor property for the second organic compound,

wherein the first layer, the second layer, and the third layer are interposed between the pair of electrodes and sequentially formed in such a way that the third layer is formed to be in contact with one of the pair of electrodes.

48. (Original) A light-emitting element according to Claim 47, wherein the first organic compound is an organic compound having an electron transporting property.

49. (Original) A light-emitting element according to Claim 47, wherein the first organic compound is a metal complex having a ligand with a  $\pi$ -conjugated skeleton.

50. (Original) A light-emitting element according to Claim 47, wherein the second organic compound is an organic compound having a hole transporting property.

51. (Original) A light-emitting element according to Claim 47, wherein the second organic compound is an organic compound having an aromatic amine skeleton.

52. (Original) A light-emitting element according to Claim 47, wherein the metal is an alkali metal, an alkaline earth metal, or a rare earth metal.

53. (Original) A light-emitting element according to Claim 47, wherein the metal oxide comprises at least one compound selected from the group consisting of vanadium oxide, chromium oxide, molybdenum oxide, cobalt oxide, and nickel oxide.

54. (Original) A light-emitting element according to Claim 47, wherein an electrode of the pair of electrodes being in contact with the third layer is made from a conductive material formed by sputtering.

55. (Original) A light-emitting element according to Claim 54, wherein the conductive material is transparent to visible light.

56. (Original) A light-emitting element according to Claim 47, wherein a part of the first layer comprises molybdenum oxide.
